## Steel and Fiberglass Garden Doors

### Strong Arm II

Strong Arm II Garden Door

An urbane upgrade from traditional sliding patio doors, our Garden doors combine style, unique functionality, and low maintenance.

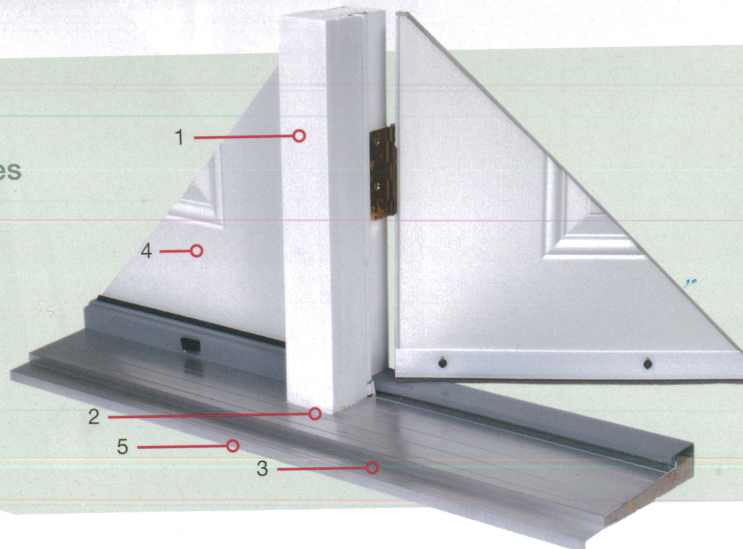

Garden doors are available in single to four wide configurations, with one panel opening as a door and the second panel opening window style (swing out only) or fixed.

All joinery is gasket sealed to protect against the elements outside; no caulking is used.

Our engineered, laminated wood posts offer superior strength and virtually eliminate warping. Metal cladding on the door post and jambs is available in our 7 standard colours. It also comes standard in mill finish aluminum sill. Optional anodized sill available for use with custom jambs.

#### Garden Door Features

1. Engineered wood post for exceptional strength
2. Gasket sealed joinery
3. One piece door sill
4. Fixed or venting panel
5. Built-in drip lip

#### Renovation Garden Doors

Our Renovation garden doors are specially sized to replace an existing sliding patio door and include the same great features you will find with our new construction garden doors.
