## Steel and Fiberglass Front Entry Doors

### Strong Arm II

**Strong Arm II  
Front Entry Door**

*\* Door comes in White & must be finished*

All Weather Windows boasts one of the most diverse front entry door lineups in the industry. Wood grain textured fiberglass, smooth fiberglass, and insulated steel doors, combined with sidelites, transoms and countless door lite possibilities.

Strong Arm II doors offer more than just good looks.

They are built to withstand whatever mother nature can throw at them.

Seams and joinery on our doors are sealed with gaskets, instead of messy caulking that can break down over time. Our posts are made from manufactured wood to give extra strength and eliminate warping.

Our new door sill features a one piece design that prevents water infiltration when properly installed. The two piece design commonly used in the industry is vulnerable to leaks at the point the two pieces are joined. In addition to our one piece design, the new sill features a drip lip to protect the area under the sill by

forcing water away.

Strong Arm II door frames incorporate a common frame construction with multi-combination post, resulting in a stronger, more versatile frame. Metal cladding on door posts and jambs are available in our 7 standard colours.
